**Technical Brochures**

Title:

**Substations physical security trends.**

## Abstracts

In response to the growing concern for the security of substation physical assets an international survey was undertaken to assess the use and effectiveness of various security measures for the prevention - detection and control of unauthorized human intervention during the construction - operation and maintenance of substations. This brochure presents the results and includes case studies of security measures to prevent unauthorised access to substation property and protect substation assets raising awareness about substation physical security issues and employee safety.
