Title:  
**Alternating Current (AC) Resistance of helically stranded Conductors**

**File Size:**1,3 MB    **Pages NB:**59    **Study Committee :** B2    **WG (TF):** WG B2.12    **Year:** 2008

## Abstracts

The electrical resistance of conductors for overhead lines depends on the cross-section, the conductivity of the aluminium alloy, the lay length of the aluminium layers. The presence of a steel core can increase the resistance due to core magnetizing effects. The TB describes a process of AC resistance calculation for bare stranded aluminium conductors, both with and without a steel core.
