Title:

**Medium Voltage DC Distribution Systems**

This Joint Working Group (JWG) C6/B4.37 has built upon and leveraged the expertise and knowledge from different Study Committees to present the potential advantages of a DC approach (MVDC networks incorporating DER) as an alternative to AC distribution systems.

As the first of its kind, this Technical Brochure summarized the latest industrial practices and engineering insight, academic interests and research advancement on Medium Voltage DC (MVDC) system at the international level. It will contribute to the accelerating of a \$multi billion market, as part of the net zero energy transition.
