Title:

Modern Techniques for Protecting and Monitoring of Transmission Lines

Abstracts

Modern transmission line protection IEDs includes a large number of additional protection elements, control and monitoring functions, which provide almost unlimited flexibility to design protection and control schemes. The TB addresses subjects related to the reliability of protection systems, digital relay filtering, applied telecommunication technologies, transmission line protection, control and monitoring functions, auxiliary functions, integration and data management, IEC 61850 impact, application examples, testing and future trends.
