Abstracts

The purpose of the Symposium is to explore the issues related to the quality of service provided by electric power delivery systems and how these systems need to be designed and operated to ensure a secure and robust service.

The Symposium is organized in a Plenary session and in 8 sessions dedicated to the following subjects:

- System Frequency and Stability
- Power Quality and System Security Indices
- Power Quality Disturbance Mitigation (2 sessions)
- System Operation and Protection in today's Market (2 sessions)
- Dispersed Generation
- Monitoring and Characterizing System Performance
